Subject: Malone-Stormwater Impoundment Analysis

Dear Warren and David,

Attached is the summarized stormwater impoundment (East Cell) analysis and final laboratory data package. The summary shows that all constituents are well below the approved discharge criteria. The majority of the water contained in the east cell of the impoundment is non-contact water with a minor volume of contact water comingled. Should you have any questions please let me know.

David- We would like to request approval to discharge the water discussed above.

Kindest Regards,

Brian Moore
